## HERE AND THERE

### October Active (October 25)

The latest active tournament at the Vancouver Bridge Centre resulted in victory for Dragoljub Milicevic, who finished a half point ahead of Dan Scoones, organizer Luc Poitras, and Joe Roback - the latter took the U1800 prize. The biggest upset was Jun Bandong (1616) beating IM Vicente Lee Jr.

## **Halloween Open** (October 17-18)

Held in conjunction with the first junior tournament of the season in the Lower Mainland, the prizes were swept by strong juniors. First was Yiming Han (4.0/5), who gave up draws to the second place finishers, Jeremy Hui and John Gong. Thirteen players participated.

## **B.C. Championship Redux**

There have been comments about the B.C. Championship on two local blogs. Roman Jiganchine gives a general overview and presents his game against Alfred Pechisker, while Dan Scoones analyzes the Yoos - Davies ending from round six:

## ***BULLET CHESS***

Hikaru Nakamura and Bruce Harper, *Bullet Chess: one minute to mate*. Milford: Russell Enterprises, 2009.

The last couple of decades have seen the rise of several tendencies which have had a profound impact on the game of chess. The rate of play has increased: traditional six-hour playing sessions have been eroded to five or four hours, while active chess (thirty minutes) has become common and five-minute blitz has given way to three minutes (at least online). The development of computers and the internet have allowed players to indulge in their favourite pastime at any time of the day and night and with opponents anywhere in the world, all without leaving the comfort of home. These tendencies have coalesced in bullet chess, an online chess game in which the time control is a mere minute per player. (It is possible to play bullet over the board, but use of a computer eliminates the inevitable insanity involving physical piece movement and clock handling with very limited time available. It should also be noted that ICC, one of the most popular online sites, defines bullet as any game with a time control less than three minutes, but the present work equates it with one-minute chess).

Playing a game in one minute may seem ridiculous to those of us who grew up with 40/2, 20/1, but it is possible, as long as one realizes that bullet is not the same as chess, a point the authors make explicit at the beginning of the book: "This is the fundamental truth about bullet chess that many players fail to understand. Bullet is certainly a form of chess, and much of what you've learned about chess applies to bullet, but bullet should never be confused with conventional chess itself!" To put it another way: five years ago GM Larry Christiansen wrote an [article](#) in which he compared chess with literature. Christiansen equated correspondence games with scholarly journals and epic novels; at the other end of the scale, he felt bullet games were on a par with comic books, graffiti, and chess columnists [*sic*]. In other words (and with apologies to any serious comic book collectors or graffiti artists reading this), he values bullet purely as entertainment. Nakamura and Harper concur - the only reason they give for playing bullet is "Because it's fun!"

This is the first book to be written on bullet chess, so for any interested party the only relevant question will be, "Is it worth acquiring?" The answer is an unequivocal "Yes!" The authors are no strangers to B.C. chess players: Hikaru Nakamura, current U.S. champion and sometime resident of Vancouver, is regarded as the world's best bullet player, while five-time former B.C. champion Bruce Harper needs no introduction from me. Together they guide the reader through all aspects of playing bullet chess - pre-moving, openings, the initiative, strategic and tactical considerations, endings, typical errors, and much more. Divided into twenty chapters, the breezy text includes many complete games and fragments to illustrate the points made. ECO codes are given for all examples, which seems a little odd in the case of the fragments. The games were all played on ICC at one minute per player; names have been omitted to protect the guilty (although handles are almost universally used online, so players are usually anonymous anyway), but we are told that many of them were played by former Canadian Junior champion Tyler Johnson. The ratings of the players are given, in the range 1700 - 3000+; likely any player above 2800 is Nakamura himself. A significant thread through the entire book is the fine balance that must be maintained between the position on the board and the time left on the clock, there is also much emphasis on the psychological aspects of play.

Physical attributes: roughly six inches by nine, two hundred and forty-eight pages, soft cover, copious diagrams, high production values by Russell Enterprises. The cover price is \$19.95. There is no index, but the chapter headings should be sufficient to locate specific topics. Foreword by Yasser Seirawan. The book is written entirely from the human perspective, so there is no advice on how to play bullet against computer programs (assuming people engage in such a masochistic endeavour). Technical matters are also not addressed, such as the different computer interfaces available or dealing with lag. Nakamura and Harper rightly emphasize the fun aspects of bullet, but in so doing perhaps present an overly rosy view of the online community. My own experience is that there are more than a few who approach bullet too intensely - they would be wise to read the very last paragraphs in the book, "A word on etiquette."

Recommended for anyone who has an interest in chess in the fast lane.

## **Book Launch**

For those in the Vancouver area, the book will officially be launched on the evening of Friday October 30, with an opportunity to watch Nakamura playing bullet live. Details at the link below.
